

Status of discussion with Flavio Carsughi (is incorporated in the new DUO concept at FRM II):

- **flag button "combined neutron/photon proposal for beamtime at the GEMS instruments at FRM II and DESY"** when user chooses one of our GEMS instruments in the FRM II proposal form
- **flag is valid for internal and external proposals**
- **flag will cause entry in database.** This is necessary for:
 - **statistics**
 - **information of the corresponding review panel** that this is a special proposal (but: of course the proposal can be rejected by the panel!)
 - **information of GEMS** that a special service for this proposal is necessary (e.g. coordination of the two beamtimes, **one contact person**)

- **same procedure for the DOOR system at DESY for the GEMS instruments at PETRA III**
- as such a proposal can also be rejected, the **organisation of the beamtimes** at both sources has to be performed **"by hand"** after both proposals are accepted.
- **this new option will certainly lead to a higher user demand using both probes**
- **option for all FRM II / MLZ instruments?**
- **model for cross facility beam time access at other NMI3 facilities?**
